

MAY

Environmental Newsletter

"The greatest threat to our planet is the belief that someone else will save it."

- Robert Swan

Welcome to May, the month with flowers to match April's showers. This month we can expect to see continued increases in heat, despite the Farmer's Almanac reporting upon a Cold May. As we transition into the properly summer months, Air is going to become more humid, plants and flowers will finally start to blossom, and the world will finally look like it's woken up from it's months-long slumber

Barcelona Increases Tree Canopy

As you know, trees provide great shade, they protect from heat, and reduce the amount of heat absorbed by concrete. Barcelona has aimed for a 30% tree coverage by 2030. Building your tree canopy reduces disease, heat stroke, energy costs, carbon emissions. Not only that, but they reduce the risk of flooding as well.

Barcelona's move towards more green ways of living represents something that all nations will have to pursue in the coming years.

YouTube Promoting Sham-Science

YouTube has been caught red-handed in engaging with advertisers that refute basic concepts of climate change. Through the use of Google and subsequently YouTube's ad system, YouTube has promoted disinformation, spreading it to nearly 73 Million Users of the app.

YouTube has a responsibility to it's users to provide accurate, scientific information, not spread misinformation, even if it means they may loose a buck or two.

Monkeys Drop Dead from Heat

Due to the extreme heat currently faced by many parts of South America, monkey shave been dropping dead from trees due to insane heats. There is what's known as a Heat Dome, which causes excessive sunshine and lack of clouds, resulting in high temperatures. This is leading to sever heat advisories and death within the region.

However, Summer Heatwaves have yet to hit the world, meaning that we can only expect for things to come up a lot worse in the following months.
