

<u>Date</u>	<u>Things Completed</u>
Monday	<ul style="list-style-type: none">Continued working on the techie-guide, started making a list of the things that I'd need to gather material on for when I was next in the tech booth
Tuesday	<ul style="list-style-type: none">In the tech booth, started the process of archiving some older footage that I found in with ancient cds. Downloaded and played with some ancient innovator lighting software which was fun, started planning on how we could have a copy of the digitized archive in the tech booth
Wednesday	<ul style="list-style-type: none">Continued my documentation of freaky lights, working on just getting proper documentation those and what each slider and thing does.
Thursday	<ul style="list-style-type: none">Fought with a metal box, got it open, learnt that the drive that was inside it was mostly corrupted and didn't really work which sucks, but oh-well. Also, started writing some of the old plays that I recorded to cds (pretty old, I know) so that they still exist in the school even when I'm gone (and writing it stupidly slow, we're super fortunate with new tech)
Friday	<ul style="list-style-type: none">Worked on more archival efforts of the disks that we had stashed in the closet. Not sure that anyone will ever use them, but Zach and I both agree that it is something fun and seemingly not entirely useless, y'know?

Summary / Highlights

- Continued my techie shenanigans, digitizing stuff from Ancient CDs, documenting things, creating lists of things we use, and general procedures.
- Archiving things is really slow because of the CD read speeds, but I can now do 2 at once, which is double the speed I was working at
