

Devon Strong

Date	Things Completed
Monday	<ul style="list-style-type: none">- Watched all 4 Matrix Movies- Played GT:New Horizons for like 4 Hours- Family Day
Tuesday	<ul style="list-style-type: none">- Worked on getting Play on Linux working, involved a bunch of package management stuff, learned a lot- Broke a bunch of packages and about half of the applications installed (apparently “–break-system=packages” wasn’t just a warning)- Got Play on Linux working and started fixing all the other things I broke
Wednesday	<ul style="list-style-type: none">- Figured out that I could just launch a codespace in the github repo for the website instead of having to commit gets all the time- Still working on fixing a few things, audio drivers got a bit borked- Continued learning more about Cybersec through the online course and Crypto Hack
Thursday	<ul style="list-style-type: none">- Semi-unrelated, but started piecing together how to make a techscript and started working towards making a techscript for “Old Brunswick”- Found another website like Cyptohack that focuses less on the problems themselves, and more on actually teaching you about how to solve them, TryHackMe, it seems like a good resource
Friday	<ul style="list-style-type: none">- Filled out this weekly summary,- Worked more on that TryHackMe site, it is really fun. Worked through about 4 and a half ish modules on there.

Summary / Highlights

- Broke a lot of things in order to get one working (mostly fixed now)
- Switched up from Cryptohack to TryHackMe because it seems more guided / structured, and worked on that
