

Devon Strong

Date	Things Completed
Monday	<ul style="list-style-type: none">- Start working through some Cybersecurity Stuff- Found a website with introductory "courses" to Cybersecurity concepts, Cryptohack- Also went through some online Cybersecurity stuff
Tuesday	<ul style="list-style-type: none">- Set up the required libraries to properly compile the code when requesting user input and strings (was evil)
Wednesday	<ul style="list-style-type: none">- Became more comfortable with Python syntax through practice problems in Cryptohack- Started working through the Cryptohack introductory module- Started the setup for Docker, but didn't get too far in
Thursday	<ul style="list-style-type: none">- Downloaded Docker & Portainer- Setup Docker, Portainer, and the Notebook Container to Run at Startup- Made sure that all the packages were properly running (needed to convert from long to bytes)
Friday	<ul style="list-style-type: none">- Worked through more levels on Cryptohack- Started working on learning xor which doesn't really seem all too complicated (so far, in a few days I'm sure I'll be 100% lost, not just 90%)

Summary

- Went and applied for a SIN (again)
- Set up required libraries to get the CS50 materials compiling correctly
- Started learning more about Python syntax
- Started the Crypto Hack introductory course
- Setup Portainer, Docker, and the Docker Image that hosts the Notebook
