Date	Things Completed

Monday
- Easter Monday, didn't do much, worked on getting caught up on some online Cybersecurity stuff a bit for a Dropbox closure

Tuesday
- Wasn't in school, but worked a bit on Cybersec stuff for the Dropbox this night, learned a bunch about TCP/IP Protocols, Packet Headers

Wednesday
- Decided to start jumping into some Python problems instead of just learning theory stuff, that was fun, worked on some simple programs and played around with crashing my computer through a python program which I played around with for longer than any reasonable person would.

Thursday
- Spent the period learning how to write a function that just determines whether or not a list input into a function is ascending or not, there are probably a million better ways to do it, but I had fun writing my little mess of code, and it works.

Friday
- Started on a program that does a Riffle Shuffle, takes like (1,2,3,4,5,6), and turns it to (1,4,2,5,3,6). Having fun with it so far, will probably start writing things quicker once I remember how to write code. Still, having fun with it, they're like little puzzles.

Summary / Highlights
- Completed a month of online Cybersec stuff (love speed running it the day of a Dropbox deadline
- Started on some practice python problems, found a pdf with 109 that were taken from some introductory CS course at some university somewhere.
