Date   ## What I Did

Monday

- First day back from the break, very tired.
- Worked on TryHackMe (Cybersecurity Stuff), but not on my actual school Cybersecurity online course which was due Tuesday.

Tuesday

- Wasn't in School Today, But I Technically sort worked towards my goal with my Online Cyber Security Course

Wednesday

- 100% honesty, my mind is completely blanking on this day. I remember listening to ABBA while doing what I did, I want to say that I was looking into some beginner SQL projects and looking at some database managers figuring. Think I settled on a Data camp course, but if that turns out to be a subscription thing, I'll look elsewhere

Thursday

- Worked on revising the Tech-Script for Old Brunswick to work on the new program that I found that works on Windows. Also spent some time finding that program, as, as it turns out, they are hard to come by.
- Kinda unrelated to tech stuff, but I also put together a general guideline for a possible game of Senior/Secret Assassin that the SSG might be hosting later.

Friday

- Updating website with the past few weeks with logs from the 19th of February onward, kind of got offtrack for a bit on account of breaking everything, but that was quick enough to go back and set up.
- Figured out that with GIT I have to properly stage the changes by uncommenting the lines, and that's why I was struggling with VS-Code commit before
- Found out that Data camp was in fact a subscription and started my search again elsewhere. Found a free textbook on Reddit by Alan Beaulieu so I'll probably just go from there

Honestly, I'm nothing if not stupid, and I usually end up writing these at the end of the week after having done the whole week, and everything usually ends up blurring together, so I'm going to start writing day-by-day instead of struggling to piece together everything at the end of the week.

Summary

- Speed ran unfinished Cyber-sec work to get it in before the Dropbox closure which was fun. Did like a month's work in a day.
-
